How to Use Tags

Written By: Brian Sallee

SUMMARY

Intro to Dynamic Lists

Before we delve into creating dynamic lists, you must first understand what they are and how they function. A dynamic list is essentially an incomplete list; and because it's incomplete, you can keep adding items onto it. A dynamic list searches through material on the site looking for tags that are relevant to the list. It then groups all of the documents together in list form.

Use the example code below to create your own dynamic list. Simply insert your own information into the appropriate fields:

[guidelist|tag=Test]

[guidelist|item=Testitem]

You can also create lists of wiki pages. Just add a comma-separated list of tags after the vertical bar, as in the following examples:

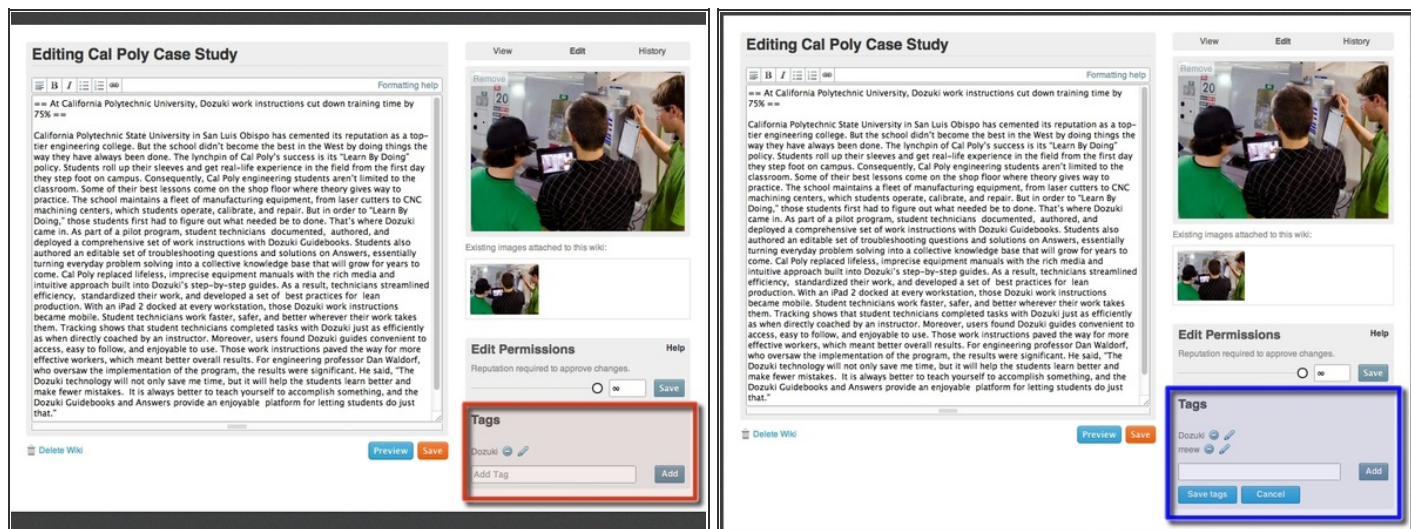

[wikilist|robotics]

[wikilist|robotics,technique]

[wikilist|robotics|namespace=Item]

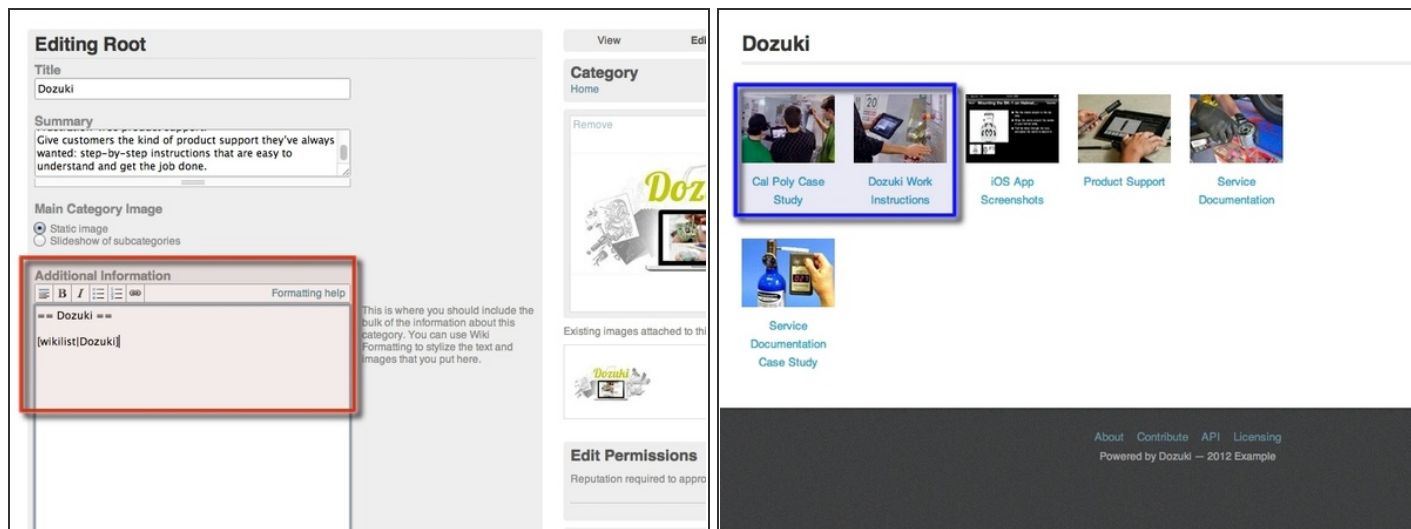

[wikilist|robotics,technique]

Step 1 — Adding Tags to a Wiki Page

- Create a Tag name and enter it in the Tag name field, click add.
- After you click **add tag** make sure you click **save**.

Step 2 — Organizing Wiki Pages Using Tags

- You can organize guides and wiki pages from different categories by using the wiki command [wikilist|your tag name] in the Additional Information box of your category.
- Your tagged wiki pages and guides will then display at the bottom of your category page.
